Specification

1. The abstract of the disclosure is objected to because of the use of the legal term "means" on line 5. Correction is required. See MPEP § 608.01(b).
2. The disclosure is objected to because of the following informalities: on page 3, last line, numeral "44" is not shown in the drawings.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Baker, III.

Baker, III shows a housing 14 having an exterior 42 and interior cavity 26; insulation 44; closure 12, 16; cooling means/refrigeration assembly 46, 50, 52, 56, 58 and associated structure; flow channel 96, 98 having ends; male coupling 94; female coupling 88; valve 110; liquid container 10; and access opening at door 12.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Teetsel, III.

Baker, III has been discussed above, but lacks the cardboard box and bag liner. Teetsel, III shows a box with a bag liner 45 discussed in column 5, lines 9-15. It would have been obvious to one of ordinary skill in the art to substitute the bag-in-box dispenser as taught by Teetsel, III for the bottle of Baker, III as both are used in the dispensing of spirits and liquor and the bag-in-box is inexpensive to employ and easy to dispose of safely.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Szabo, Phelps et al., Harootian, Jr. et al., Bach et al., and Roberts show other refrigeration devices; and Martens and Geshay show other bag-in-box dispensers.
